Telecommunications Engineer - UNEFA - Venezuela - Completed 2012

Network & Cloud Engineer | Networking · Automation · AWS · Terraform

Telecommunications Engineer with over 10 years operating networks and critical infrastructure in multi-country corporate environments: multi-vendor networks (Cisco, Huawei, Fortinet, Extreme), SDN with Cisco Catalyst Center, automation with Python, Windows/Linux servers, and Zabbix monitoring.

On top of that base I added cloud infrastructure: I build and automate architectures on AWS with Terraform and automate deployments with GitHub Actions. I hold the AWS Solutions Architect Associate and Cloud Practitioner certifications. I am looking for roles that combine networking, automation, and cloud.

CERTIFICATIONS:

AWS Cloud Practitioner (Amazon Web Service). ID: 6S29YEPC9N4QQK3H

AWS Solution Architect Associate (Amazon Web Service). ID: 6J4SW81CR2QQ1ZKF

Microsoft Certified: Azure Fundamentals (AZ 900). ID: DB559082B6D70600

Scrum Master Professional Certificate (Certiprof). ID: TLHZSHHQHV-TMTPSYSW-RHSLFHTFJR

CLOUD PROJECTS

Personal lab projects. All the code is on GitHub.

AWS three-tier with Terraform:

Three-tier architecture deployed entirely with Terraform: a VPC with public and private subnets across 2 availability zones, an Application Load Balancer, an Auto Scaling Group (2 to 4 instances, scaling on CPU), and RDS MySQL with the password stored in Secrets Manager. Instances have no public IP and no SSH: access is through SSM. Terraform state lives in S3 with locking in DynamoDB. The README lists the security practices applied and the ones still missing for production.

Technologies: Terraform, VPC, ALB, Auto Scaling, RDS MySQL, Secrets Manager, IAM / SSM.

[View code on GitHub](#)

Portfolio:

Static site in a private S3 bucket that only CloudFront can read, through Origin Access Control. Domain on Route 53 and HTTPS with an ACM certificate. All infrastructure is in Terraform with remote state, and GitHub Actions runs the deployment.

Technologies: S3, CloudFront, Origin Access Control, Route 53, ACM, Terraform, GitHub Actions.

[View code on GitHub](#)

F1 Stats: API en FastAPI and container:

Web application with an async FastAPI backend (httpx), an in-memory TTL cache with per-URL locking, pytest tests with no network calls, and a Docker container. The GitHub Actions pipeline builds the image, starts the container, checks its health, and runs the tests. I use the project as an AWS deployment lab (ECS Fargate); automation with Terraform.

Technologies: Python, FastAPI, Docker, GitHub Actions, pytest, ECS Fargate.

[View code on GitHub](#)

Stack de monitoreo con Docker Compose:

Node Exporter, Prometheus, and Grafana started with a single command. The datasource and dashboard are provisioned from files, with health checks, startup ordering, persistent volumes, and an isolated network. It complements my earlier experience with Zabbix.

Technologies: Docker Compose, Prometheus, Grafana, Node Exporter.

PROFESSIONAL PROJECTS IN NETWORKING AND AUTOMATION

Automated network auditing and remediation (NetDevOps):

Internal tools in Python (Netmiko / Pandas) to audit, bulk-configure, and remediate vulnerabilities across +1000 network nodes. First-year result: 30% lower response times and 25% better compliance.

Technologies: Python, Netmiko, Pandas.

[View code on GitHub](#)

Mass upgrade of 400 Cisco 9000 Series switches:

Led the migration and upgrade with Cisco Catalyst Center to reduce technological obsolescence and secure the regional network estate. Regional compliance rose from 14% to 60%.

Technologies: Cisco Catalyst Center, Catalyst 9000, SDN.

Multi-vendor quick configuration scripts:

Python scripts for Cisco IOS-X, NX-OS, Extreme, and Huawei that cut human errors by 40% and reduced resolution times.

Technologies: Python, Cisco IOS-X / NX-OS, Extreme, Huawei.

[View code on GitHub](#)

Genesys Cloud call backup to AWS S3:

Integration between Genesys Cloud and an S3 bucket to ensure availability and disaster recovery of the call backup.

Technologies: Genesys Cloud, AWS S3.

Migration telephony infrastructure On-premise to Genesys Cloud:

Migration of critical telephony infrastructure from On-Premise to Genesys Cloud, ensuring business continuity in 5 countries (call traffic, queues, agents, flows and IVRs).

Technologies: Genesys Cloud, Asterisk, Linux, MySQL.

Automation Scripts for Genesys Cloud Management:

Python Scripts for automation, management and data extraction on the Genesys Cloud CX Contact Center platform using its official APIs.

Technologies: Genesys Cloud, Python, Pandas.

[View code on GitHub](#)

Virtualization:

Implementation of Zabbix on Linux CentOS for monitoring Linio LATAM IT infrastructure.

Virtualization of MySQL Server for replication of information and Contact Center metrics.

Virtualization of Linux Server (CentOS) for storage of backup and information of expenses, email accounts.

Technologies: Linux, MySQL, Zabbix, Proxmox.

TECHNICAL SKILLS

Cloud e IaC: AWS (VPC / EC2 / ALB / Auto Scaling / S3 / IAM / Secrets Manager / SSM / RDS / CloudFront / Route 53), Terraform, CloudFormation (básico), Azure (VMs / Vnet / Blob Storage / Entra ID / Application Gateway - Load Balancer / VM Scale Sets / Azure Key Vault / Azure Front Door / Azure DNS).

Networking: Cisco Catalyst Center / DNA Center, Cisco / Huawei / Extreme, Fortinet / Sophos / pfSense, OSPF / BGP / RIP, VLANs / STP / LACP, SNMP / Wireless (WLAN), Cisco IOS-X / NX-OS.

Automation: Python (Netmiko / Pandas / Requests / FastAPI), Bash, Netbox, API / REST APIs.

Containers and CI/CD: Docker / Docker Compose, GitHub Actions, Git.

Monitoreo: Zabbix, Grafana, Wireshark.

Systems and Virtualization: Linux, Windows Server / Active Directory / GPO, Hyper-V / Proxmox / VMware ESXi, MySQL, Genesys Cloud / Asterisk.

Management: Scrum, ITSM, Project Management, Jira, Office 365.

Others: Excel Intermediate level, Power BI basic, MySQLDatabases.

WORK EXPERIENCE

NetSecOps Analyst - Falabella Tecnología Corporativa / Grupo Falabella - august 2024 - may 2026

Led and executed large-scale regional networking and security projects on a corporate campus, improving deployment speed by 15% across Chile, Colombia, and Peru.

Led and executed the mass migration and upgrade of 400 Cisco Catalyst 9000 Series switches using Cisco Catalyst Center, raising regional compliance from 14% to 60%.

Decommissioned and securely replaced legacy systems (such as Cisco Prime) because of latent vulnerabilities.

Automated repetitive network tasks with Python scripts and the Netbox API, reducing provisioning times.

Level 2 support for LAN, WLAN, and WAN networks in multi-vendor environments (Cisco, Huawei, Extreme).

Developed Python scripts for compliance tasks, vulnerability remediation, and bulk configuration.

Continuous improvement of network stability through incident analysis and process optimization.

Regional technical coordination with infrastructure, vendor, and security teams (Argentina, Chile, Peru, Colombia).

Platform Engineer - Linio Colombia / Falabella.com - september 2019 - august 2024

Administration and L2/L3 support for a hybrid platform of Windows Server (Active Directory, GPO, WSUS) and Linux (Ubuntu, CentOS) for over 500 users, with 99.9% uptime.

Critical migration of On-Premise telephony (Asterisk) to Genesys Cloud with continuity across 5 countries (flows, IVRs, and call traffic), and central administration of regional telephony with 99.3% availability.

Perimeter security with firewalls and Site-Site / SSL VPN tunnels (Fortinet, Sophos, pfSense).

Administration of perimeter security through Firewalls and Site-Site / SSL VPN tunnels (Fortinet, Sophos, pfSense).

Office 365 management (Licensing, Groups, Sharepoint permissions).

Implemented Zabbix for proactive monitoring (alerts and metrics) of Linio LATAM's IT infrastructure.

Server and service virtualization with Hyper-V and Proxmox; Office 365 / SharePoint licensing and permissions management.

IT Supervisor - Linio Venezuela - august 2016 – september 2019

Administration of Windows Server (Active Directory, GPO, WSUS) and Linux (Ubuntu Server, CentOS) for over 500 users, with 99.9% uptime.

Administration of the Asterisk telephony and MySQL database of the solution, plus firewalls and Site-Site / SSL VPN.

Implemented Zabbix, analyzed performance with Wireshark and logs, and documented IT administration processes and policies.
