Ingeniero en Telecomunicaciones - UNEFA - Venezuela – Obtenido en 2012

Cloud Engineer | AWS · Terraform · GitHub Actions · Docker

Telecommunications Engineer with over 10 years operating networks and critical infrastructure in multi-country corporate environments. I build and automate architectures on AWS with Terraform and automate deployments with GitHub Actions. I hold the AWS Solutions Architect Associate, AWS Cloud Practitioner, and Azure Fundamentals certifications. I want to contribute to cloud and infrastructure engineering teams, drawing on my networking experience (VPC, subnets, load balancing, VPN, firewalls), hybrid infrastructure (cloud / on-premise), Linux/Windows servers, Zabbix monitoring, and Python automation.

CERTIFICATIONS:

AWS Cloud Practitioner (Amazon Web Services). ID: 6J4SW81CR2QQ1ZKF

AWS Solutions Architect Associate (Amazon Web Services). ID: 6S29YEPC9N4QQK3H

Microsoft Certified: Azure Fundamentals (AZ-900). ID: DB559082B6D70600

Scrum Master Professional Certificate (Certiprof). ID: TLHZSHHQHV-TMTPSYSW-RHSLFHTFJR

TECHNICAL SKILLS:

Cloud and IaC: AWS (VPC / EC2 / ALB / Auto Scaling / S3 / IAM / Secrets Manager / SSM / RDS / CloudFront / Route 53), Terraform, Azure (VMs / VNet / Blob Storage / Entra ID / VM Scale Sets).

Containers and CI/CD: Docker / Docker Compose, GitHub Actions, Git.

Automation: Python (FastAPI / Netmiko / Pandas / Requests), Bash, Netbox, REST APIs.

Monitoring: Zabbix, Grafana, Wireshark, traffic analysis, incident troubleshooting.

Networking: Cisco Catalyst Center (DNA Center), Cisco / Huawei / Extreme, Fortinet / Sophos / pfSense, OSPF / BGP / RIP, VLANs / STP / LACP, SNMP, WLAN, VPN.

Systems and virtualization: Linux, Windows Server / Active Directory / GPO, Hyper-V / Proxmox / VMware ESXi, MySQL, Genesys Cloud / Asterisk.

Management: Scrum, ITIL, Project Management, Jira, Office 365.

CLOUD PROJECTS (PERSONAL LAB)

All the code is on GitHub.

AWS three-tier con Terraform

Three-tier architecture deployed entirely with Terraform: a VPC with public and private subnets across 2 availability zones, an Application Load Balancer, an Auto Scaling Group (2 to 4 instances, scaling on CPU), and RDS MySQL with the password stored in Secrets Manager. Instances have no public IP and no SSH: access is through SSM. Terraform state lives in S3 with locking in DynamoDB. The README lists the security practices applied and the ones still missing for production.

Technologies: Terraform, VPC, ALB, Auto Scaling, RDS MySQL, Secrets Manager, IAM / SSM.

Portfolio on AWS

Static site in a private S3 bucket that only CloudFront can read, through Origin Access Control. Domain on Route 53 and HTTPS with an ACM certificate. All infrastructure is in Terraform with remote state, and GitHub Actions runs the deployment.

Technologies: S3, CloudFront, Origin Access Control, Route 53, ACM, Terraform, GitHub Actions.

F1 Stats: FastAPI API and container

Web application with an async FastAPI backend (httpx), an in-memory TTL cache with per-URL locking, pytest tests with no network calls, and a Docker container. The GitHub Actions pipeline builds the image, starts the container, checks its health, and runs the tests. I use the project as a lab to practice AWS deployment (ECS Fargate) and automation with Terraform.

Technologies: Python, FastAPI, Docker, GitHub Actions, pytest, ECS Fargate, Terraform.

Monitoring stack with Docker Compose

Node Exporter, Prometheus, and Grafana started with a single command. The datasource and dashboard are provisioned from files, with health checks, startup ordering, persistent volumes, and an isolated network. It complements my earlier experience with Zabbix.

Technologies: Docker Compose, Prometheus, Grafana, Node Exporter.

WORK EXPERIENCE

NetSecOps Analyst - Falabella Tecnología Corporativa / Grupo Falabella - August 2024 – May 2026

- Automated repetitive network tasks with Python scripts and the Netbox API, reducing provisioning times.
- Developed Python scripts for compliance tasks, vulnerability remediation, and bulk configuration.
- Led and executed the mass migration and upgrade of 400 Cisco Catalyst 9000 Series switches using Cisco Catalyst Center, raising regional compliance from 14% to 60%.
- Led and executed large-scale regional networking, security, and infrastructure projects on a corporate campus, improving deployment speed by 15% across Chile, Colombia, and Peru.
- Decommissioned and securely replaced legacy systems (such as Cisco Prime) because of latent vulnerabilities.
- Level 2 support for LAN, WLAN, and WAN networks in Cisco, Huawei, and Extreme environments.
- Continuous improvement of network stability through incident analysis and process optimization.
- Regional technical coordination with infrastructure, vendor, and security teams (Argentina, Chile, Peru, Colombia).

Platform Engineer - Linio Colombia / Falabella.com - September 2019 – August 2024

- Administration and L2/L3 support for a hybrid platform of Windows Server (Active Directory, GPO, WSUS) and Linux (Ubuntu Server, CentOS) for over 500 users, with 99.9% uptime.
- Critical migration of On-Premise telephony (Asterisk) to Genesys Cloud, with continuity across 5 countries (flows, IVRs, and call traffic), and central administration of regional telephony (Genesys Cloud, Asterisk) with 99.3% availability.
- Implemented Zabbix for proactive monitoring (alerts and metrics) of Linio LATAM's IT infrastructure.
- Perimeter security with firewalls and Site-to-Site / SSL VPN tunnels (Fortinet, Sophos, pfSense).
- Server and service virtualization with Hyper-V and Proxmox.
- Office 365 administration (licensing, groups, SharePoint permissions).

IT Supervisor - Linio Venezuela - August 2016 – September 2019

- Administered Windows Server (Active Directory, GPO, WSUS) and Linux (Ubuntu Server, CentOS) for over 500 users, with 99.9% uptime.
- Implemented and administered Zabbix for Linio Venezuela's infrastructure.
- Administered firewalls and Site-to-Site / SSL VPN (Fortinet, pfSense).
- Analyzed infrastructure performance with Wireshark, logs, and Zabbix.
- Administered the Asterisk telephony system and its MySQL database; administered Office 365.
- Defined and documented IT administration processes and policies.

PROFESSIONAL AUTOMATION AND INFRASTRUCTURE PROJECTS

Automated network auditing and remediation (NetDevOps):

Internal Python tools to audit, bulk-configure, and remediate vulnerabilities across 1000+ network nodes. First-year result: 30% lower response times and 25% better compliance.

Technologies: Python, Netmiko, Pandas.

[View code on GitHub](#)

Genesys Cloud call backup to AWS S3:

Integration between Genesys Cloud and an S3 bucket to ensure availability and disaster recovery of the call backup.

Technologies: Genesys Cloud, AWS S3.

Automation Scripts for Genesys Cloud Management:

Python Scripts for automation, management and data extraction on the Genesys Cloud CX Contact Center platform using its official APIs.

Technologies: Genesys Cloud, Python, Pandas.

[View code on GitHub](#)

Multi-vendor quick configuration scripts:

Python scripts for Cisco IOS-X, NX-OS, Extreme, and Huawei that cut human errors by 40% and reduced resolution times.

Technologies: Python, Cisco IOS-X / NX-OS, Extreme, Huawei.
