Ingeniero en Telecomunicaciones - UNEFA - Venezuela – Obtenido en 2012

Network Engineer | Network Automation | NetDevOps

Telecommunications Engineer with more than 10 years of experience in networks and IT infrastructure in corporate environments across several countries. Experience with LAN, WLAN and WAN support, switching and routing, multi-vendor networks (Cisco, Huawei and Extreme), perimeter security and monitoring. I develop Python tools with Netmiko and Pandas for network audits, bulk configuration and vulnerability fixes. I have worked on regional projects and operational improvements with measurable results. As a complement, I have knowledge of AWS, Terraform, and CI/CD, and I hold the AWS Solutions Architect Associate and Cloud Practitioner certifications.

TECHNICAL SKILLS:

Networking: LAN, Wireless (WLAN), VLANs, STP, LACP, OSPF, BGP, RIP, SNMP, VPN.

Vendors and platforms: Cisco IOS-XE / NX-OS (Nexus), Catalyst 9000, Cisco Catalyst Center / DNA Center, Huawei, Extreme, Fortinet, Sophos, pfSense.

Automation: Python (Netmiko / Pandas / Requests), Bash, Netbox, REST APIs.

Monitoring: Zabbix, Grafana, Wireshark, traffic analysis, incident troubleshooting.

Systems and virtualization: Linux, Windows Server / Active Directory / GPO, Hyper-V / Proxmox / VMware ESXi, MySQL, Genesys Cloud / Asterisk.

Cloud and IaC: AWS (VPC / EC2 / ALB / Auto Scaling / S3 / IAM / Secrets Manager / SSM / RDS / CloudFront / Route 53), Terraform, Azure (VMs / VNet / Blob Storage / Entra ID / VM Scale Sets).

Containers and CI/CD: Docker / Docker Compose, GitHub Actions, Git.

Management: Scrum, ITIL, Project Management, Jira, Office 365.

WORK EXPERIENCE

NetSecOps Analyst - Falabella Tecnología Corporativa / Grupo Falabella - August 2024 – May 2026

- Led and executed the mass migration and upgrade of 400 Cisco Catalyst 9000 Series switches using Cisco Catalyst Center, raising regional compliance from 14% to 60%.
- Led and executed large-scale regional networking, security, and infrastructure projects on a corporate campus, improving deployment speed by 15% across Chile, Colombia, and Peru.
- Level 2 support for LAN, WLAN, and WAN networks in Cisco, Huawei, and Extreme environments.
- Automated repetitive network tasks with Python scripts and the Netbox API, reducing provisioning times.
- Developed Python scripts for compliance tasks, vulnerability remediation, and bulk configuration.
- Decommissioned and securely replaced legacy systems (such as Cisco Prime) because of latent vulnerabilities.
- Continuous improvement of network stability through incident analysis and process optimization.
- Regional technical coordination with infrastructure, vendor, and security teams (Argentina, Chile, Peru, Colombia).

Platform Engineer - Linio Colombia / Falabella.com - September 2019 – August 2024

- Perimeter security with firewalls and Site-to-Site / SSL VPN tunnels (Fortinet, Sophos, pfSense).
- Implemented Zabbix for proactive monitoring (alerts and metrics) of Linio LATAM's IT infrastructure.
- Administration and L2/L3 support for a hybrid platform of Windows Server (Active Directory, GPO, WSUS) and Linux (Ubuntu Server, CentOS) for over 500 users, with 99.9% uptime.
- Critical migration of On-Premise telephony (Asterisk) to Genesys Cloud, with continuity across 5 countries (flows,

IVRs, and call traffic), and central administration of regional telephony (Genesys Cloud, Asterisk) with 99.3% availability.

IT Supervisor - Linio Venezuela - August 2016 – September 2019

- Administered Windows Server (Active Directory, GPO, WSUS) and Linux (Ubuntu Server, CentOS) for over 500 users, with 99.9% uptime.
- Administered firewalls and Site-to-Site / SSL VPN (Fortinet, pfSense).
- Implemented and administered Zabbix for Linio Venezuela's infrastructure.
- Analyzed infrastructure performance with Wireshark, logs, and Zabbix.
- Administered the Asterisk telephony system and its MySQL database; administered Office 365.
- Defined and documented IT administration processes and policies.

PROFESSIONAL PROJECTS IN NETWORKING AND AUTOMATION

Automated network auditing and remediation (NetDevOps):

Internal Python tools to audit, bulk-configure, and remediate vulnerabilities across 1000+ network nodes. First-year result: 30% lower response times and 25% better compliance.

Technologies: Python, Netmiko, Pandas.

[View code on GitHub](#)

Multi-vendor quick configuration scripts:

Python scripts for Cisco IOS-X, NX-OS, Extreme, and Huawei that cut human errors by 40% and reduced resolution times.

Technologies: Python, Cisco IOS-X / NX-OS, Extreme, Huawei.

PERSONAL LAB PROJECTS (CLOUD)

All the code is on GitHub..

AWS three-tier con Terraform:

VPC with public and private subnets across 2 availability zones, Application Load Balancer, Auto Scaling Group (2 to 4 instances), and RDS MySQL with the password in Secrets Manager. No public IPs or SSH on instances (access through SSM). Terraform state in S3 with DynamoDB locking.

Technologies: Terraform, VPC, ALB, Auto Scaling, RDS MySQL, Secrets Manager, IAM / SSM.

[View code on GitHub](#)

Portfolio on AWS:

Static site in a private S3 bucket served by CloudFront (Origin Access Control), domain on Route 53, and HTTPS with ACM. Infrastructure in Terraform and deployment with GitHub Actions.

Technologies: S3, CloudFront, Origin Access Control, Route 53, ACM, Terraform, GitHub Actions.

F1 Stats: FastAPI API and container:

Web application with an async FastAPI backend (httpx), an in-memory TTL cache with per-URL locking, pytest tests with no network calls, and a Docker container. The GitHub Actions pipeline builds the image, starts the container, checks its health, and runs the tests. I use the project as an AWS deployment lab (ECS Fargate) and automation with Terraform.

Technologies: Python, FastAPI, Docker, GitHub Actions, pytest, ECS Fargate, Terraform.

[View code on GitHub](#)

Monitoring stack with Docker Compose:

Node Exporter, Prometheus, and Grafana started with a single command; datasource and dashboard provisioned from files. Complements my experience with Zabbix.

Technologies: Docker Compose, Prometheus, Grafana, Node Exporter.
